

Rhythm Syndicate Tournament Bot

Discord Developer Portal — what to create, enable, and copy (Windows setup)

1. Create the application

- Go to: <https://discord.com/developers/applications>
- Click **New Application**
- Name suggestion: **RS Tourney** or **Rhythm Syndicate Tourney** (your call)
- Create → open the app

2. Bot user + token

- Left sidebar → **Bot**
- Click **Add Bot** / Reset Token if needed
- Click **Reset Token** → **Copy** the token
- Paste into local **.env** as: **DISCORD_TOKEN=...**
- **Never** paste the token into chat, GitHub, or GROK_BRIDGE
- Optional: set bot username / avatar (use RS logo if you want)

3. Privileged Gateway Intents (Bot page)

- **MESSAGE CONTENT INTENT** → **ON** (required to read Smash Drums score embeds)
- Server Members Intent → **OFF** (not required for this bot)
- Presence Intent → **OFF**
- Save Changes

4. OAuth2 invite URL (get the bot into the server)

- Left sidebar → **OAuth2** → **URL Generator**
- Scopes (check both):
- ☒ **bot**
- ☒ **applications.commands** (slash commands: /tourney and /rs)
- Bot Permissions (check these):
- ☒ View Channels
- ☒ Send Messages
- ☒ Send Messages in Threads (if you use threads later)
- ☒ Embed Links
- ☒ Attach Files (logo / future images)
- ☒ Read Message History
- ☒ Add Reactions (☒ verified / ☐ pending)
- ☒ Use External Emojis (optional)
- ☒ Administrator — **not** required (avoid unless you insist)
- Copy the generated URL at the bottom → open in browser → pick **Rhythm Syndicate** (or a test server) → Authorize

5. Server-side channel permissions

- In the tourney channel (or category), ensure the **bot's role** can:
- View Channel · Send Messages · Embed Links · Attach Files · Read History · Add Reactions
- If the channel is private, explicitly allow the bot role (or @everyone already can see it)
- Staff who run /rs need **Manage Server** or a role whose ID you put in env (below)

6. IDs to copy (Developer Mode on Discord)

- Discord Settings → App Settings → Advanced → **Developer Mode ON**
- Right-click the **server name** → Copy Server ID → **RS_GUILD_ID**
- Right-click the **tourney channel** → Copy Channel ID → **RS_CHANNEL_ID**
- Optional: separate submit channel → **RS_SUBMIT_CHANNEL_ID** (else same as channel)
- Right-click each **staff role** that should run /rs → Copy Role ID

- Put them comma-separated in **RS_ADMIN_ROLE_IDS** (example: 111,222)
- Anyone with **Manage Server** can also use `/rs` even without those roles

7. .env file (what the bot reads)

- On the PC, in folder: **Desktop\RhythmSyndicateTourneyBot**
- Copy **.env.example** → **.env**
- Fill:
- **DISCORD_TOKEN=...**
- **RS_GUILD_ID=...**
- **RS_CHANNEL_ID=...**
- **RS_ADMIN_ROLE_IDS=...**
- # optional: **RS_SUBMIT_CHANNEL_ID=...**

8. After invite — quick prove list (when bot is running)

- Bot shows online in the member list
- Slash commands appear: type `/tourney` and `/rs`
- `/tourney help` shows build string (e.g. foundation-v1)
- Staff: `/rs dashboard post` in the tourney channel
- If slash commands missing: wait a minute, or re-invite with **applications.commands** scope

9. What you do NOT need for Season 1 foundation

- No webhook (this is a full bot, not Larry-style webhook)
- No privileged Members intent
- No Gemini / OCR key for v1 (game score embeds only for now)
- No connection to Surprise Attack or Indies bots (separate app + token)

Project path: Desktop\RhythmSyndicateTourneyBot\ · Run later: python bot\main.py · Docs: SETUP.md · OPERATOR_GUIDE.md · RENDER.md
